                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 95, App
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 927, Application US/09023655

Patent No. 6607879

GENERAL INFORMATION:
APPLICANT: Goods, Benjamin G.
APPLICANT: Goods, Benjamin G.
APPLICANT: Jeffrey J. Seilhamer
ITILE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
ITILE OF INVENTION: EXPRESSION
NUMBER OF SEQUENCES: 1508
CORRESPONDENCE ADDRESS: 1508
CORRESPONDENCE ADDRESS: 1508
STREET: 3174 PORTER DRIVE
CITY: PALO ALTO
STATE: CALIFORNIA
COUNTRY: CALIFORNIA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Human DNA sequence from clone RP3-460JB on chromosome 20g11.21-11.23 Contains the 3' end of the gene for a novel protein similar to N-myc downstream regulated (NDRG1) the 5' end of a gene encoding a novel protein tyrosine kinase, BSTs, STSs and GSSS,
                                                                                                                                                                                                                                                                                                                                                       PAT 14-JUL-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (13.-JUL-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Aug 7, 2000 this sequence version replaced gi:6425549.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone are annotated as variations variation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em.; EMBL; Sw.; SMISSPROT; Tr.; TREMBL; Wp.; WORNER; Information on the WORNER database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome 20, constructed by the Sanger Centre Chromosome 20 http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome 20.

Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chhz0

IMPORTANT: This sequence is not the entire insert of clone RP3-460J8 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP3-460J8 is at 66741 in this sequence. The true left end of clone RP3-460J8 is at 100 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequencing problems, such as compressions and repeats, all regions were covered by the quality data (i.e., phred quality >= as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP3-460J8 is from the further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /codon_start=1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Web site: http://www-seq.wi.mit.edu

* NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                      HTG; HTGS_PHASE1.

Submitted (12-JUN-1998) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. M 63108, USA.

* NOTE: This is a 'working draft' sequence. It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Sequence clones from Trosophila Gene Collection I (Rubin et al.,
Science 2000). The sequence has been subjected to integrity checks
for sequence accuracy, presence of a polyA tail and contiguity
within 100 kb in the genome. Thus we believe the sequence to
reflect accurately this particular cDNA clone. However, there are
artifacts associated with the generation of cDNA clones that may
have not been detected in our initial analyses such as internal
priming priming from contaminating genomic DNA, retained introns
due to reverse transcriptuse errors that result in single base changes.

cc encoding NOVX (or its complement, fragment or variant). NOVX is NOV1-14, Cc 15a, 15b, 16a, and 16b. The NOVX polypeptide, nucleic acid encoding it can and antibody against it, are useful for treating or preventing (e.g. by gene therapy) a NOVX-associated disorder in humans, e.g. cardiomyopathy, atheres or cancers. The NOVX polypeptide contained are also useful for determining the presence of predisposition to the diseases. The NOVX nucleic acid and polypeptide are predisposition to the diseases. The NOVX nucleic acid and polypeptide are concers described with aberrant NOVX expression or activity, e.g. cancers (e.g. adenocarcinoma, lymphoma, prostate cancer uterus cancers (immune response, graft-versus-host disease, acquired immunodeficiency syndrome (AIDS), asthma, Crohn's disease, hypertension, congenital heart defects, multiple soleroais, inflammation or Albright hereditary osteodystrophy and many other diseases listed in the conditions. The DNA encoding the protein is useful in gene therapy for treating the conditions. This is also useful in detection assays, or concern the DNA encoding the protein is useful analysis of various for developing a powerful assay system for functional malysis of various human disorders, as well as in diagnostic applications. The present consequence is a reverse transcriptase (RT)-PCR primer used to measure consequence is a reverse transcriptase (RT)-PCR primer used to measure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diabetes; cancer; adenocarcinoma; lymphoma; prostate cancer; uterus cancer; limine response; graft-versus-host disease; acquired immunodeficiency syndrome; AIDS; asthma; Crohn's disease; hypertension; congenital heart defects; multiple sclerosis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; gene; ss; NOVX; gene therapy; cardiomyopathy; atherosclerosis; cell signal processing disorder; metabolic pathway modulation disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Shimkets RA;

The invention relates to an isolated polypeptide (NoVX) a mature form of NOVX, aziant (differing by no more than 15%), the nucleotide concoding NOVX (art its complement, fragment or variant). NOVX is NOV1-14, 15a, 15b, 16a, and 16b. The NOVX plypeptide, nucleic acid encoding it and antibody against it, are useful for treating or preventing (e.g. by gene therapy) a NOVX-associated disorder in humans, e.g. cardiomyopathy, atherosclerosis, a disorder related to cell signal processing and metabolic pathway meduation, diabetes or cancers. The NOVX polypeptide metabolic pathway meduation, diabetes or cancers. The NOVX polypeptide are predisposition to the diseases. The NOVX nucleic acid and polypeptide are predisposition to the diseases. The NOVX nucleic acid and polypeptide are specially useful in therapeutic or prophylactic applications for disorders associated with aberrant NOVX expression or activity, e.g. cancers) immune response, graft-versus-host disease, hypertension, cancers (e.g. adenocarcinoma, lymphoma, prostate cancer or uterus cancers) immune response, graft-versus-host disease, hypertension, companital heart defects, multiple scherosis, inflammation or Albright hereditary osteodystrophy and many other diseases listed in the specification. The DNA encoding the protein is useful in gene therapy for treating the conditions. This is also useful in detection assays, or property and analysis or treating the conditions that is also useful in the conditions that is also useful in the conditions that is also useful and assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               chromosome mapping, tissue typing, diagnostic or prognostic assays, or for developing a powerful assay system for functional analysis of various human disorders, as well as in diagnostic applications. The present sequence encodes a NOVX protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, SH2/SH3-domain-containing adapter; Src-Like Adapter Protein-2; SLSAP-2; immune disease; cancer; Sh2P-2; immune disease; cancer; neoplasm; inflammation disorder; rheumatoid arthritis; osteoarthritis; psoriasis; rhinitis; allergy; inflammatory bowel disease; gene therapy; Crohn's disease; systemic lupus erythematosus; tissus/organ rejection; multiple sclerosis; asthma; acute respiratory distress syndrome; pulmonary disorder; dermatological; neuroprotective; gene; sex
                    New polypeptides for treating or preventing a disorder associated with them, in humans, e.g. cardiomyopathy, atherosclerosis or cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0;

27-JUN-2002

```
The present invention relates to novel human ORFX polypeptides and their coding sequences (ABP63631-ABP64681 and ABQ99194-ABQ99267). The sequences were discovered in human atherogenic cells, in particular in platelets and human umbilical vein endothelial cells (HUVEC) and are expressed in many other tissues as well. Atherogenic cells are cells which have the potential to develop atherosclerotic plaques. The ORFX polypeptides and nucleic acids are useful for treating or preventing a pathological condition associated with an ORFX-associated disorder, e.g. cancer, cardiovascular disease, allergy, autoimmune disease, wound healing, blood for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at
                                                                                                                                                                                                                                                           New polypeptide designated ORFX are present in human atherogenic cells and are useful to prevent and treat ORFX-associated disorders including cancer, allergy, wound healing or autoimmune, cardiovascular or inflammatory disease.

discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene; NOVX; metabolic disorder; diabetes; cardiomyopathy;

                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABIL16176-ABIL0611), expressed DNA sequences (ABIL16175) and the encoded proteins (ABBS7137-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention
                                                                      isolated nucleic acid detection reagent for detecting 1000 or more as from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

The invention relates to an isolated polypeptide termed NOVX (NOV1, 2a, 2b, 3a, 3b, 4a, 4b, 5, 6, 7a-c, 8a-e, 9a-b, 10, 11, 12a-c, 13, 14, 15, 2ca-b, 20a-b, 21-30) appearing as ABUS528-4, a variant of NOVX, a mature form of NOVX, and a variant of the mature form of NOVX, and a variant of the mature form of NOVX, and a variant of the mature form of NOVX and a vector comprising NOVX (NOVX). A second of comprising the vector, an anti-NOVX antibody (ab), determining the presence or amount of NOVX or NOVX NA in a sample, and identifying an agent that binds or modulates the expression or activity of NOVX. NOVX, NOVX, NOVX, NOVX, NOVX NA or ab is useful for treating or preventing a NOVX-associated disorder in a subject, preferably human. Ab is useful for identifying an agent that binds or modulates the expression or activity of NOVX. NOVX, NOVX NA or ab is useful for treating or preventing a NOVX-associated disorders, and agent that binds or mount of NOVX in a sample. NOVX is useful for treating or preventing a NOVX associated disease, anorexia, neurodegenerative disorders, Alzheimer's disease, contact of a sorders, Alzheimer's disease, and the metabolic disorders, metabolic disturbances associated with obesity, the metabolic syndrome X and wasting disorders associated with chronic disease, various cancers, endocrine, connective tissue, blood, vascular, protocoal or viral infections. NOVX NOVX NoVX No or ab is useful in screening assays, detection assays, predictive medicine, and in methods of creatment. NOVX is useful assay. NOVX is useful assay. NOVX No or ab is useful in a NOVX cereen for potential antiqual activity. The cell is useful for producing non-human transgenic antimals. The value of a linical testing procedure. The present connective antique and the modulate part of a clinical testing procedure. The present connective encodes a NOVX NoVX and colinical testing procedure. The present
                                                                                                                                                                                                                                                                                                                     New isolated NOVX polypeptide useful for treating cardiomyopathy, atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and

PRTS protein and DNA are useful for diagnosing, treating and preventing gastrointestinal disorders (gastritis, cirrhosis, Crohn's disease).

Countinisatinal disorders (gastritis, cirrhosis, Crohn's disease).

Countinisation, cardiovascular disorder (atherosclerosis, hypertension, myocardial infarction), cell proliferative disorders (hepatitis, cancer, psortasis), developmental disorders (Cubling's syndrome, hypothyroidism), epithelial disorder (vitiligo, keloid, eczema), neurological disorders (epitepsy, Alzheimer's disease, Pick's disease, Huttington's disease, Pick's disease, Huttington's disease, cortein is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PRTS DNA is useful for creating knockin humanised animals or transgenic animals to model human diseases, or tissues from patients to detect altered PKIN expression. The present sequence is human PRTS-1 cDNA

AAH57161 to AAH57576 represent cell and tissue specific polymucleotide sequences (I). (I) can have cytostatic, immunomodulatory and neuroprotective activities, and can be used in gene therapy. (I) and proteins (II) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, mimetics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunoglobulins, inhamiticrs, drug compounds and pharmaceutical agents. Expression of (I) in a sample indicates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. (I) and (II) are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The developments and for investigating a predisposition to a disorder where the treatments and for investigating a predisposition to a disorder where the gene profile with a cancer, immunopathology or neuropathology
                                                                                                                                                                                             Human; tissue specific; diagnosis; brain; heart; skeletal muscle; lung; liver; uterus; ovary; stomach; intestine; kidney; pancreas; ss; metabolic disease; developmental disease; cytostatic; immunomodulatory; neuroprotective; gene therapy; cancer; immunopathology; neuropathology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New cell and tissue specific polynucleotides useful for diagnosis, prognosis or monitoring of treatments for disorders where the gene is associated with a cancer, immunopathology or neuropathology,
                                                                                                                                                                      Human skeletal muscle cell specific cDNA sequence SEQ ID NO:223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3076 BP; 800 A; 814 C; 792 G; 670 T; 0 U; 0 Other;

biodiversity.

```
The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed centivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in sisue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic dissorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amine acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in

                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a combination comprising cDNAs or their complements that are differentially expressed in respiratory disorder. The combination is useful for preparing a composition for diagnosing or treating respiratory disorders e.g. lung cancer, chronic obstructive pulmonary disease, emphysema or asthma. The present sequence represents human cDNA differentially expressed during lung cancer
                                                                                                                                                                                                                                                                                                                              New combination comprising cDNAs that are differentially expressed in respiratory disorders, useful for diagnosing or treating respiratory disorders e.g., lung cancer, chronic obstructive pulmonary disease, emphysema or asthma.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis

```
AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polymucleotides may be used in the prevention, diagnosis and
transmit of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
pupplement the patients own production of (I). Additionally, (I)
polymucleotides may be used to produce the secreted (I), by inserting the
protein. (I) proteins and polymucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
to AAK87694 represent human immune/haematopoietic artigen genomic
sequences from the present invention. AAK45492 to AAK87693 and AAM82169
represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human immune/haematopoietic antigen genomic sequence SEQ ID NO:22724
Disclosure; SEQ ID NO 22725; 3071pp + Sequence Listing; English.

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM,

WPI; 2001-483426/52

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 22724; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polyuucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the protein. (1) proteins and polynucleotides may be used to protein each of a cancer metastases of haematopoietic-derived cells AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK87699 and AAM82169 represent sequences used in the exemplification of the present invention

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligomuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarcse gol electrophoresis. Vector DNA was prepared from a derivative of pND42 (gil 473214 | gb | AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptores complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AL/2/541 651 bp mRNA linear EST 11-JUN-1999 BNLGH:8347 Six-day Cotton fiber Gossypium hirsutum cDNA 5' similar to (AF039373) polyprotein (Arabidopsis thaliana), mRNA sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ծ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (http://www.jax.orgyresources/documents/dhares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4712114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    296 bp DNA linear GSS 17-JUN-2003 CH240 358G5.T7 CHORI-240 Bos taurus genomic clone CH240 358G5,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

Sequence 3698, Application US/09489039A
Patent No. 6610836
GENRAL INFORMATION:
FOR TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: PIREUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 2709,2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT APPLICATION NUMBER: US 60/117,747
PRIOR PILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 3698
LENGTH: 1245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
